## Research Interests

---

**Physical, statistical, and data-driven modeling of complex systems** to enable process monitoring and control, digital twins, operations management, and intelligent automation, with applications in advanced manufacturing and healthcare. My specific research interests include:

- Network-based modeling of complex physical systems for multiphysics simulation
- Sensor-based monitoring and control of additive manufacturing processes
- Statistical modeling of high-dimensional spatiotemporal systems
- Digital twins for modeling, monitoring, and operation
- Data-driven analytics and signal processing

## Honors & Awards

---

- **2026, Finalist**, IISE M&D Best Student Paper Award, Arlington, TX.
- **2026, Participant, Doctoral Student Colloquium**, 2026 IISE Annual Conference, Arlington, TX.
- **2025, IME Doctoral Student Scholarship**, Department of Industrial and Manufacturing Engineering, The Pennsylvania State University.
- **2025, Cover Article**, *Chaos: An Interdisciplinary Journal of Nonlinear Science*, Volume 35, Issue 4.
- **2023, Finalist**, IISE M&D Best Student Paper Award, New Orleans, LA.
- **2021, 3<sup>rd</sup> Place**, ASME Computers and Information in Engineering Student Hackathon.
- **2020, NSF INTERN Scholarship**, IBM Thomas J. Watson Research Center.
- **2016, Outstanding Senior in Systems Engineering**, University of New Haven.

## Publications

## Teaching Experience

---

### Instructor, Industrial and Manufacturing Engineering

- IE 424: Process Quality Engineering (Spring 2022)
  - Taught a 3-credit undergraduate engineering course with 116 students enrolled.
  - Assumed full responsibility for the course, including designing course materials, preparing and delivering lectures.
  - Created homework assignments, quizzes, and examinations.

### Teaching Assistant, Industrial and Manufacturing Engineering

- IE 453: Simulation Modeling for Decision Support (Fall 2022)
  - Led two hands-on Simio laboratory sessions for 53 students.
- IE 516: Applied Stochastic Processes (Spring 2020; Spring 2021)

## Research Experience

---

### Self-organizing Networks for Multiphysics Modeling of Complex Systems

**Research Assistant** (*Sponsored by NIH R01 HL172292 and NSF CMMI-2531899*)

- Cardiac Multiphysics Modeling
  - Designed a novel self-organizing network representation of cardiac geometry.
  - Developed computational methodologies for simulating spatiotemporal electrical dynamics and mechanical contraction on the network representation.
  - Established a mesh-free and compact framework for representing cardiac geometry and multiphysics dynamics in cyberspace, supporting personalized cardiac digital twins and

targeted treatment planning.

- Thermal Modeling in Additive Manufacturing
  - Developed a self-organizing network framework for modeling heat accumulation and transfer in geometrically complex parts.
  - Designed computational methodologies for model calibration.
  - Established a generalized framework for optimal design and calibration of network-based thermal models, demonstrating strong potential for improving the prediction and control of advanced manufacturing processes.
- **Research Outputs & Recognition**
  - Four peer-reviewed journal publications in leading journals
    - *Journal of Manufacturing Science and Engineering*
    - *Chaos: An Interdisciplinary Journal of Nonlinear Science*
  - One peer-reviewed conference publication.
  - Cover article in *Chaos: An Interdisciplinary Journal of Nonlinear Science*.
  - Finalist in the 2026 IISE Manufacturing & Design Best Student Paper Competition.

### **Sensor-based Modeling, Monitoring, and Control of Additive Manufacturing**

**Research Assistant** (*Sponsored by NSF CMMI-2531899, NSF CMMI-2011289, and NIST Cooperative Agreement 70NANB19H127*)

- In Situ Layerwise Inspection and Quality Monitoring in Additive Manufacturing
  - Develop statistical modeling and monitoring methodologies for in situ quality assessment of additive manufacturing processes using layerwise imaging data.
  - Develop a wavelet-based statistical framework for multiscale analysis of variance (ANOVA) and image-guided statistical process control (SPC).
  - Establish a data-driven framework for monitoring layer-to-layer process evolution and identifying abnormal process behavior during additive manufacturing.
- Probabilistic Modeling and Characterization of Melt Pool Geometry
  - Develop a novel approach to simulate photon emission for statistical estimation and modeling of the multimodal probability distribution of a melt pool.
  - Develop a multimodal probabilistic model to characterize the complex geometric distribution and variability of melt pools from in situ imaging data.
  - Quantify the effects of process conditions on melt pool geometry and variability, providing insights into process-geometry relationships.
- **Research Outputs & Recognition**
  - Three peer-reviewed journal publications in leading journals
    - *IISE Transactions*
    - *Additive Manufacturing*
    - *IEEE Robotics and Automation Letters*
  - Finalist in the 2023 IISE Manufacturing & Design Best Student Paper Competition.

## Invited Guest Lecture

---

- **R. Liu** (2026). “Multimodal Probabilistic Modeling of Melt Pool Geometry Variations in Additive Manufacturing.” IE 484: Introduction to Maintainability Engineering, **University of Tennessee, Knoxville**.

## Mentoring

---

### Undergraduate Students

*(Funded by NSF REU Program)*

- Alex Luna-Ow (Summer 2025), “Network Simulation of Cardiomyocyte Contraction Dynamics”. The abstract was accepted for poster presentation at the 2025 BMES Annual Meeting in San Diego, CA.
- Ho Chung Cheung (Fall 2019-Spring 2020), "Virtual Reality for Smart Manufacturing".
- Davina Stamp (Spring 2020), "Simulation of Action Potential of a Myocyte in Virtual Reality".

### Graduate Student

- Xinghao Peng (Fall 2024-present),
  - "SCOUT: Spatiotemporal Coverage for Optimal Unmanned Tasking", published in *Proceedings of the 2025 IEEE 21st International Conference on Automation Science and Engineering (CASE)*.
  - "STEM: SStructural EMbedding for Graph Representation of 3D Designs", accepted by *Manufacturing Letters*.

## Service Activities

---

- 2025–2026, **Vice President**, ASQ Student Chapter, The Pennsylvania State University.
- 2024–2025, **Training Assistant**, Asian Student Fitness Club, The Pennsylvania State University.
- 2024, **Session Chair**, “Data Assimilation for Simulation Optimization,” 2024 INFORMS Annual Meeting.

### Referee

- *ASME Journal of Manufacturing Science and Engineering*

- *IEEE Robotics and Automation Letters*
- *IEEE Transactions on Biomedical Engineering*
- *IEEE Journal of Biomedical and Health Informatics*
- *IEEE Conference on Automation Science and Engineering*

## Professional Membership

---

- Institute of Industrial and Systems Engineers (IISE)
  - Quality Control and Reliability Engineering (QCRE)
  - Data Analytics and Information Systems (DAIS)
  - Manufacturing and Design (M&D)
- Institute for Operations Research and the Management Sciences (INFORMS)
  - Quality, Statistics, and Reliability Section
  - Data Mining Society
  - Simulation Society
- Institute of Electrical and Electronics Engineers (IEEE)
  - Robotics and Automation Society
